MBG: Summary

Background

- Digital discussion around MBG on platform X reflects public sentiment and debate.
- Dataset: tweets collected during program implementation period (provided by panitia).
- Objective: analyze topics, actors, polarization, and actionable recommendations.

Figure: /kaggle/working/outputs/daily_volume.png

Research Questions

- What are the main themes in public discussion about MBG?
- Which actors shape the conversation and how information flows?
- How polarized is the public discourse and which topics drive polarization?

Methodology (1/2)

- Data cleaning and preprocessing of provided tweets.
- Topic modeling (LDA, BERTopic fallback) to identify themes.

Methodology (2/2)

- Network analysis to detect influencers and communities.
- Sentiment & polarization analysis aggregated by topic and time.

Results & Discussion

Figure: /kaggle/working/outputs/top_hashtags.csv

Figure: /kaggle/working/outputs/top_influencers.csv

Important Findings

- Top themes identified with prevalence percentages.
- Key influencer accounts and their roles in information spread.
- Measured level of polarity and topics with highest divergence.

Suggestions

- Design communication addressing top concerns and misinformation channels.
- Engage influencers from supportive and neutral communities for balanced outreach.
- Monitor topic evolution and rapid response for spikes in negative sentiment.

AI Usage Declaration

- AI tools used for code scaffolding and literature guidance only (to be declared).
- All substantive analysis, modeling decisions, and final interpretations performed by the team.
